

NEW DEVELOPMENT

STEADFAST POLO CLUB ASSISTED LIVING

LEXINGTON, KY

OVERVIEW

At the Polo Club Assisted Living facility, the dining spaces, hallways, recreations rooms, and bedrooms all provide circadian lighting for residents and staff. The Circadian Lighting system within the space is controlled by a GPS beacon. This beacon tells the system when to change temperatures and deplete specific wavelengths throughout the 24-hour day cycle. The lighting is wirelessly controlled through Bluetooth mesh built into the power supply. Products include troffers, downlights, and A-lamps. The system comes completely programmed with customized wall switches for dimming or on/off controls.
