

netLiNK Controls LED DIMMING

With 0-10 Volt LED Dimming, netLiNK Wireless Controls allows you control every aspect of your outdoor lighting system.

- 0-10 Volt LED Dimming
 - Remote Scheduling via Web Portal
 - Individual Pole Control
 - Motion Sensor Capability
- Increase LED Efficiency
Extend LED Life

When dimming LED site lights, you gain efficiency and extend the life of your lights. Many owners are powering their site lights at wattages of 70-80% and still maintaining bright light levels. Not noticing any differences then when powering LED site lights at 100%.

With netLiNK Controls, you can have total control of the desired light levels for peak shopping, and for late night/early morning security lighting.
